ASSIGNMENT 1

WHAT DO I DO?

I am a civil engineer by profession. After receiving my license, I spent five years working in the Philippines in various fields of construction. My first experience was in the construction of viaducts and bridges, after which I moved on to housing construction and finally building construction. After gaining a variety of experiences in my home country, I decided to try my luck abroad and ended up in Singapore, where I spent almost ten years working. I'm here together with you right now to learn more about "BIM."

WHAT DO I KNOW ABOUT BIM. WHY AM I INTERESTED IN BIM?

At the time, I worked as an office engineer in Singapore and was actively involved in project management. Three years later, the top management of my previous company recommended that we take a brief course in the Revit application, which was a well-liked program in Singapore at the time. Fortunately, I was one of those who took it and finished it. Since that day, it has blown my mind, I am amazed at what I have learned, and everything has changed in terms of my perspectives towards my career path, and I have been an enthusiast with Revit software and others.

BIM is a complete package of a coordinated designed to foresee or minimize the occurrence of problem before construction, according to my understanding and experience with it. However, as I went through each stage of my experiences, my understanding changed and grew increasingly deeper. What I observed about BIM is that it is a flexible work of art that aids in project organization from initial concepts all the way through to end users, or for whatever purposes it may be used as long as you start a project.

An organized source of information that enables and facilitates project management's creation of a successful, cost-effective plan before construction.

WHAT DO I WANT TO LEARN FROM THIS PROGRAM?

First and foremost, I want to develop my abilities, increase my knowledge, exchange thoughts with other talent, particularly with our professors, and, in the end, adapt my practice to the needs of the local market.
